

# Grade Selection Guide

## GROUND TO SIZE RANDOM ROD (GRR) BLANKS

<b>TMK-320</b>	The most widely used 10% submicron grade in North America. A workhorse with superior performance across a broad range of materials and applications.
<b>TMK-326</b>	Good balance of wear resistance and toughness properties for composite materials and abrasive applications.
<b>TMK-3</b>	Highest wear resistance grade. Typically used in woods, composites and plastics applications.
